Angle of Friction - Geotechdata.info

In the stress plane of Shear stress-effective normal stress, the soil friction angle is the angle of inclination with respect to the horizontal axis of the Mohr-Coulomb shear resistance line.

Mohr-Coulomb Model - Civil & Environmental Engineering

As for sands, the angle of dilation depends on the angle of internal friction. For non-cohesive soils (sand, gravel) with the angle of internal friction $>30^\circ$ the value of dilation angle can be estimated as $=-30^\circ$. A negative value of dilation angle is acceptable only for rather loose sands.
